Contents show] User interface For Windows users, the interface of AutoCAD consists of: A keyboard and mouse A screen A graphics tablet (optional) A drawing window A 3D view A menu bar AutoCAD can be used in any orientation. This can be useful in drafting when a flat object or the drawing orientation is not known until the drawing is created. Other benefits are being able to share a drawing and never have to worry about the drawing being turned in an incorrect orientation. Layers Using layers is one of the more important features of AutoCAD. When a drawing is opened, layers are initially set to hidden. The default, visible layers are called page 1 through page 8, and layers can be created with the "Create Page" command or by placing an object in a new layer. The "Set Current View Layer" command can be used to select the layer with the currently visible object. To reset a layer to hidden, use the "Set Layer Visibility" command. If you have not specified the visible layers when you open a drawing, then the default is to not display the first page of layers. If the drawing is opened in a tabbed view,

then the tab that is selected displays the active layer. To set a new default layer for the current view, use the "Set View Default Layer" command. Layers are essential to the way that AutoCAD operates, but they also can add a level of complexity. Many companies use layers to set up workflows and to keep their designs organized. In some programs, the same layer can be used for two different designs, and then an entirely different design can be created in the same layer without having to make any adjustments to the previous drawing. AutoCAD uses the term layer in a slightly different way than the term "layer" is used in other CAD systems. For example, in other CAD systems, a layer is used to organize objects based on physical property. Objects that have the same physical property are located on the same layer. In AutoCAD, layers are used to organize objects based on their needs or usefulness, not based on their physical properties. Layers are useful because they let you organize and view your drawing at different levels of abstraction. The top layer is what you typically will see in a 2D drawing. Objects are not moved to other layers until they are designed to be moved

Archiving refers to the ability to save a drawing for later editing. In order to accomplish this with the core release, save AutoCAD as a dwg file in the appropriate folder. In practice, this means that the output should be saved as AutoCAD drawing as a dwg file and then, if desired, the dwg file can be converted back to DWGX (or AutoCAD). However, a DWGX is not a true save, as changes to the file are not saved until it is saved as a dwg file again. To archive a drawing, see 'Archiving'. Chapter 11: Workspaces Workspaces: In AutoCAD, a workspaces is a group of folders, normally by drawing set, to hold the drawings. AutoCAD also allows you to have multiple workspace folders. Most users create only one workspace, which means that all of the drawings are in a single folder, but if you have more than one workspace, you can keep the drawings in separate folders. You may have a single AutoCAD installation or multiple installations in multiple work locations, and you may have a single workspace and multiple workspaces. Each workspace has its own toolbar and ribbon. The workspace bar lists all

workspaces you have open. When you press the arrow key, it will move to the next workspace on the list. It does not move to the first workspace in the list. You can use the mouse to move to the first workspace or to move to the last workspace. Also, you can use keyboard shortcuts to move to other workspaces. The Key Commands menu includes access to the Windows key, the Application key and the AutoCAD shortcut key. For more information, see Chapter 8. Table 1-1 shows the actions available in each workspace. Table 1-1. Workstation action

The fish are dead and pale yellow and are huddled together along a fence line on Siesta Drive, between 17th Street and 18th Street. Jim O'Mara, who lives on Camino Real, said that it's not unusual to see dead fish in the canal during the week. But the fish are hanging from the fence line, and he said that he has never seen a dead fish that was this big. "My 2-year-old is not even awake yet, and I've seen this. I would never believe my eyes," he said. For the past week, O'Mara has been walking along Camino Real in the morning with his dog, only to find dead fish hanging

from the fence line. When he arrived on the street, he counted seven dead fish hanging from the fence. Two weeks ago, he said, he counted two dead fish hanging from the fence. Last week, two dead fish were hanging from the fence line. The dead fish were hanging from the fence line, and the fish appeared to be decomposing, O'Mara said. "The most I've ever seen is like maybe two, and this is 12," he said. "There's no way they could live through this." Fishermen have been hauling dead fish for days in the canal and along the canal banks, said O'Mara. "They told me the fish aren't running because of the warm water," he said. "But this happens all the time." O'Mara said that he thinks a boat hit the canal. Because of the dead fish, O'Mara said, fishermen have stopped fishing and his family can no longer walk along the canal. "I've been walking my dog to go to the store, and all
