FileStream Sync TOGO Activation Key For Windows

FileStream Sync TOGO is a reliable tool designed to easily synchronize folders from different drives or devices and to create backup files. The software is easy to use and enables you to create action templates that you can activate with each folder update. Additionally, you can automate the synchronization process. Synchronize folders on various devices FileStream Sync TOGO enables you to perform folder synchronization between folders from different computer drives or from other devices. Thus, you can sync files between your computer and a laptop or a notebook, between computers in a network, between desktop and USB devices. You simply need to install the software in both locations, the file transfer can be done within seconds. The software is portable and can easily run on many different machines or devices, such as computers, laptops, netbooks, even USB memory drives. The software prompts you to create tasks, that define an action, path between two folders and the direction of the process. The path represents the connection between the two folders that you wish to synchronize. Create tasks and configure the synchronization Each task implies that you set a source folder, that can be found on your computer for instance, and the destination, on a different drive or external memory device. The task enables you to easily copy the files from the source to the destination while setting exclusion or inclusion filters. For instance, you may exclude temporary files from the transfer. FileStream Sync TOGO offers a suitable solution to creating file backups, in a remote location. You may activate the transfer manually or schedule it to be performed automatically, every day or whenever the software starts. Moreover, you can set a limit to the number or size of files that you include in the task. Reliable tool for file analysis, transfer and backup You may run a preliminary check of the files and the folders, in order to determine how much free space is available and what changes have been made in the source folder. Additionally, the software can save activity logs, that can also reflect if errors occur, if changes have been made or if conflicts exist. Thus, FileStream Sync TOGO is reliable instrument that enables you to safely duplicate and transfer files from one location to another. FileStream Sync TOGO Features: Set rules for each category of the files and folders to be transferred, to include, delete or ignore specific files and folders. Automatically backup files and folders by using a period of time or an event. Activate and deactivate synchronization tasks. Backup and restore
