The United States National Bank of Kansas City, M3b to mysqldump, what's up with M2? UPDATE: From the MySQL manual M2 (mysqldump) is not a standard part of MySQL; it is provided by Oracle Corporation as an added convenience for those who are already familiar with that particular package. M2 is designed to work with the native mysqldump and support for M2 is built into a mysqldump binary. This means that you must use M2 instead of the standard mysqldump. M2 is not intended for use with other tools that read to and write from tables. So maybe I get it now, it's an old Oracle's thing. My question would be, who developed and uses such a nasty thing as mysqldump, and why that much developers don't use Percona. FWIW I wrote a perl script for backing up my mysql into a MYSQL dump. I use it when I do a clean install and when my server is going down or I've just had to reboot because of a software update. It works well and it takes advantage of the mysql bulk backup facility that mysql offers. I recently downloaded the M2 command-line MySQL utility. I tend to use mysqldump because I've developed a very sophisticated backup mechanism that I can't really describe e79caf774b
