Roblox is an online game creation and game play platform that enables players to create their own games or join games created by other players in a 3D, virtual world. The game is operated by Roblox Corporation, a privately held company from San Mateo, California. Roblox was created in 2004 by David Baszucki and Erik Cassel, two former employees of LucasArts, where they had both worked on the Monkey Island series. In 2004, the game was under the name Project L2, and was released as an open-source game. The game included a tutorial that used a graphical user interface (GUI) that was later removed, and the game was programmed in the programming language Lua. A programmer could create their own game using commands in the interface, or join a different programmer's game. Roblox never achieved the scale of some other online video games. Roblox was

described as "kind of a hobbyist game" by Baszucki and Cassel, who both expected it to grow into something much larger. Roblox was profitable from the start, but Roblox had a much larger user base than it could support. The company originally relied on an IndieGoGo crowdfunding campaign to support its growth. According to Cassel, Roblox generated less revenue in 2004, than the combined revenue of all of Microsoft's Xbox Live Arcade, and Sony's PlayStation Network. In the years since Roblox's release, Roblox added features such as an in-game scripting language, events, and rooms. Events can be triggered by in-game actions, such as successfully picking up a key in a certain room. Rooms are private "caves" where players can meet in-game or talk with other players. In 2009, Roblox Corporation was sold by Cassel and became a subsidiary of Foundry Networks. In 2009, a Roblox user attempted to run a widely publicized experiment where they left the game running for two years to save electricity. User-created games could not be run unless a server was running. Roblox announced in 2016 that all

user-created games would be able to run without a server, and this change was enabled in February 2017. In November 2015, Roblox introduced a new program for educators. In 2016, it launched a book-reading program, and in 2017, it introduced a form of social networking to allow people to meet friends. In April 2016, Roblox began to allow the
